

RESEARCH CLINIC

General information

Supervisor:	Dr. Beatrix Futak-Campbell
Title of clinic:	Secure Borders
Number of students:	1-2
Major (<i>if applicable and approved by the Major Convener</i>):	WP
(Pre)requisites (<i>if applicable</i>):	Hungarian language

Research context

In 2015, more than a million refugees entered Europe. Most of them came from conflict-ridden states such as Syria, Iraq and Afghanistan. It was then that the Hungarian government unilaterally decided to stop people moving further into Europe by building a barbed wire fence along the Hungarian-Serbian border. By focusing on this border and the communities living and working there, the project contributes to a better understanding of migration, borders, and border security.

The research clinic is to support the final stages of this large research project.

Students' tasks and activities

Please specify the tasks and activities, timeline, the learning aims and how they are assessed, i.e. what the deliverables will be.

Tasks:

- Transcribing and finalising transcriptions;
- Translating from Hungarian to English;
- Proofreading Hungarian texts.

Timeline:

- Block 3-4

Learning aims:

- To understand the different stages of the research process and various publications and outputs that can become of it;
- Engage with different data sets audio and visual;
- Learn to transcribe and translate data;
- Learn to prepare a manuscript for publication;

Deliverables:

- Transcriptions and translations
