

RESEARCH CLINIC

General information

Supervisor:	David Zetland
Title of clinic:	Non-revenue water -- research
Number of students:	1
Major (<i>if applicable and approved by the Major Convener</i>):	GED/EES
(Pre)requisites (<i>if applicable</i>):	Data and statistical analysis

Research context

I am looking for a student to help me develop a research project related to urban water governance. This factor is difficult to understand (due to principal-agent and asymmetric information problems), so I propose to use non-revenue water (NRW) as a proxy for management performance.

If this paper is published, it could save millions of lives. Or be totally ignored. #highrisk

Students' tasks and activities

Please specify the tasks and activities, timeline, the learning aims and how they are assessed, i.e. what the deliverables will be.

The research assistant will help me with literature review and (mostly) collecting and analyzing NRW data. We might co-author a paper. Maybe it's a waste of time. #realworldresearch experience guaranteed.

If you apply, then explain how you deal with failure. That's likely ;)
