

The future of the past starts in Leiden.

Leiden University's master's degree in archaeology offers the most diverse programme of its type in the Netherlands. Our Archaeology master offers various regional and thematic specialisations, with the teaching programme being closely linked to on-going research projects all over the world. Our specialisations give you in-depth knowledge of the discipline in question. At the same time you are able to take part in on-going debates about general theory, the development of new methods, and the use of information technology.

Find out more about our (R)MA specialisations! Visit the Information Market.
